Problem #1: If you dilute 175 mL of a 1.6 M solution of LiCl to 1.0 L, determine the new concentration of the solution.

Solution:  $M_1 V_1 = M_2 V_2$   
 $(1.6 \text{ mol/L}) (175 \text{ mL}) = (x) (1000 \text{ mL})$   
 $x = 0.28 \text{ M}$ . Note that

# Access Free Concentration

1000 mL was used rather than 1.0 L. Remember to keep the volume units consistent.

ChemTeam: Dilution  
Problems #1-10

How many water you have to add to 450 ml of a solution 0.3 M to obtain a concentration 0.25 M ? This problems can

# Access Free Concentration

be easily solved by remembering that  $M_i V_i = M_f V_f$  and thus

$$(0.45)(0.3) = (0.25)(V_f)$$

$$V_f = \frac{(0.45)(0.3)}{0.25} = 0.54 \text{ liter} = 540 \text{ ml}$$

(0.25) Therefore the water to add is  $540 - 470 = 70 \text{ ml}$ .

Alternatively we can observe that the initial concentration is  $0.3/0.25 = 1.2$  times more concentrated

# Access Free Concentration

than the final one.

## Problems

Concentration Units:

Solved problems

If concentration of solution is 20 %, we understand that there are 20 g solute in 100 g solution.

Example: 10 g salt and 70 g water are mixed and solution is prepared. Find concentration of

# Access Free Concentration Solution by percent mass. Problems

Concentration with Examples | Online Chemistry Tutorials  
Often, a worker will need to change the concentration of a solution by changing the amount of solvent. Dilution is the addition of solvent, which

# Access Free Concentration

decreases the concentration of the solute in the solution. Concentration is the removal of solvent, which

Dilutions and Concentrations –  
Introductory Chemistry ...

You can use the dilution equation,  $M_1V_1 = M_2V_2$ . In this

# Access Free Concentration

problem, the initial molarity is 3.00 M, the initial volume is 2.50 mL or  $2.50 \times 10^{-3}$  L and the final volume is 0.175 L.

Use these known values to calculate the final molarity,  $M_2$ :

So, the final concentration in molarity of the solution is.  $4.29 \times 10^{-2}$  M.

# Access Free Concentration Solution Problems

How to Calculate  
Concentrations When  
Making Dilutions ...

Divide the mass of  
the solute by the  
total mass of the  
solution. Set up your  
equation so the  
concentration  $C =$   
mass of the  
solute/total mass of  
the solution. Plug in  
your values and solve

# Access Free Concentration

the equation to find the concentration of your solution. In our example,  $C = (10 \text{ g}) / (1,210 \text{ g}) = 0.00826$ .

## Mixture Problems With Solutions

The following video looks at calculating concentration of solutions. We will look at a sample problem dealing with mass/volume percent (m/v)%. Example: Many people use a solution of sodium phosphate ( $\text{Na}_3\text{PO}_4$  - commonly called

# Access Free Concentration

TSP), to clean walls before putting up wallpaper. The recommended concentration is 1.7%(m/v).

Concentration of  
Solutions (solutions,  
examples, videos)  
Calculating the  
concentration of a  
chemical solution is a  
basic skill all students

# Access Free Concentration

of chemistry must develop early in their studies. What is concentration?

Concentration refers to the amount of solute that is dissolved in a solvent. We normally think of a solute as a solid that is added to a solvent (e.g., adding table salt to water), but the solute

Percent Solutions.

One way to describe the concentration of a solution is by the percent of a solute in the solvent. The percent can further be determined in one of two ways: (1) the ratio of the mass of the solute divided by the mass of the

# Access Free Concentration

Solution or (2) the ratio of the volume of the solute divided by the volume of the solution.

Percent Solutions |  
Chemistry for Non-  
Majors

Concentration is an expression of how much solute is dissolved in a solvent in a chemical

# Access Free Concentration

Solution. There are multiple units of concentration. Which unit you use depends on how you intend to use the chemical solution. The most common units are molarity, molality, normality, mass percent, volume percent, and mole fraction.
