7 Setting Up Lamp Getting Linux

You could think of Setting Up LAMP as four books in one, but it's actually something much more valuable: a single volume that presents the open-source technologies known collectively as LAMP—Linux, Apache, MySQL, and PHP—as tightly dovetailed components of today's most affordable and effective platform for building dynamic web-based applications.

Setting up LAMP: Getting Linux, Apache, MySQL, and PHP ...

```
sudo apt update. sudo apt install  
apache2. If this is the first time you're  
using sudo within this session, you'll  
be prompted to provide your user's  
password to confirm you have the right  
privileges to manage system packages  
with apt. You'll also be prompted to
```

PHP (LAMP) stack on ...~~

```
sudo apt-get install php5  
libapache2-mod-php5. NOTE: Again,  
depending upon your OS installation,  
this might require some dependencies  
to be met. Allow apt-get to pick up  
those dependencies. When the  
installation is complete, restart Apache  
with the command: sudo  
/etc/init.d/apache2 restart
```

LAMP stands for Linux, Apache,
MySQL, and PHP. Together, they
provide a proven set of software for
delivering high-performance web
applications. Each component
contributes essential capabilities to the
stack: Linux: The operating system.
